

DHI MARKET AREA: PRODUCT SAFETY & ENVIRONMENTAL RISK

# CHEMICALS AND REGULATORY COMPLIANCE

## Easing regulatory compliance

Placing chemical products on the market requires extensive knowledge of global regulatory requirements. We can help you with this. We monitor chemicals regulations in more than 45 global markets covering EU, North America and Asia-Pacific. With our in-depth knowledge and experience, we can support you in meeting requirements such as classification, labelling, registration and documentation. Our services cover the following four areas:

### CHEMICALS REGULATION WORLDWIDE (INCLUDING REACH)

We can ease the process of registering your products and support you in Global Product Stewardship. Our solutions include:

- cost-effective dossier preparation for:
  - registration of substances according to REACH or non-EU regulations
  - application for authorisation to use substances on Annex XIV of REACH
- tailored solutions using non-test methodologies like QSAR and read-across
- software and tools for monitoring compliance

### SUPPLY CHAIN AND HAZARD COMMUNICATION

Communicating hazards is not an option, but a mandatory requirement. We can help, thanks to our global compliance insight. We combine global and local know-how and provide you with tailored solutions. We can support you with:

- hazard communication
- addressing local regulation
- creating compliant labels and safety documents, including SDS
- chemical management software

### BIOCIDES — NOTIFICATION AND DOCUMENTATION

Placing your biocide products on the market is a complex and lengthy process. We can ease the process by supporting you at every step, so that you can concentrate on your core business. We can help you manoeuvre within the legislative framework and maintain regulatory compliance over time. We offer:

- strategic advice on regulatory demands
- tests in order to assure the needed documentation
- registrations and authorisations
- leverage in the communication with authorities

### DATA AND TEST STRATEGIES

Manufacturers and importers of chemicals must document environmentally safe products according to the EU REACH regulation. We can support you by developing tailored ecotoxicological test strategies in compliance with the OECD principles of Good Laboratory Practice (GLP).
